Professional Summary

Computer Science Engineering student with a strong foundation in C++, Data Structures & Algorithms, and Web Development. Skilled in building practical applications using HTML, CSS, JavaScript, C++, and Supabase through projects, hackathons, and open-source contributions. Passionate about problem-solving and continuous learning.

Education

Presidency University Bachelor of Technology in Computer Science and Engineering CGPA: 8.31/10	2023 – 2027
Nisarga Pre-University College Class XII (PCMB) – 87%	2021 – 2023
Govt High School Kumsi Class X – 88%	2020 – 2021

Technical Skills

Languages	Java, C++, SQL, Python
AI/ML	Scikit-learn, Pandas, NumPy, Predictive Modeling, NLP
Data Analytics	Data Cleaning, Feature Engineering, Data Visualization
Tools	Git, Jupyter Notebook, Streamlit, VS Code
Database	MySQL, Supabase
Concepts	Machine Learning, AI, DSA, OOP, DBMS
Soft Skills	Leadership, Problem Solving, Team Collaboration

Professional Experience

Edunet Foundation (IBM SkillsBuild) <i>Front End Web Development Intern</i>	Aug 2025 – Sep 2025
- Developed responsive web pages using HTML, CSS, and JavaScript with clean, user-friendly interfaces and interactive frontend components. - Implemented responsive layouts for cross-device compatibility and applied debugging and browser compatibility best practices during the internship.	

Key Projects

Jagruthi – Smart Women Safety System <i>Flutter, IoT, Supabase, Google Maps API, Geofencing</i>	Feb 2025 – Apr 2025
- Developed a women safety system integrating a mobile application with an IoT-based emergency wearable for SOS alerts and real-time location sharing. - Implemented geofencing for route deviation detection and built a Supabase-powered dashboard to manage emergency incidents and user data.	
Threat Rakshaka – AI-Powered APK Risk Analysis & Threat Intelligence System <i>Kotlin, React.js, Supabase, MobSF, Risk Analysis</i>	Jan 2026 – Mar 2026
- Developed an Android application to perform permission-based APK risk assessment and generate security reports for potentially malicious applications. - Built a React.js cyber intelligence dashboard with Supabase to manage threat reports, visualize security analytics, and support cyber investigations. - Performed partial static APK analysis in the Android application and integrated MobSF for comprehensive static and dynamic analysis in the law enforcement dashboard.	
Bhoomithra – AI-Powered Smart Agriculture Platform <i>Python, Scikit-learn, Pandas, NumPy, Streamlit, Machine Learning</i>	Jan 2026 – Apr 2026
- Developed an AI-powered agriculture platform featuring crop recommendation, crop rotation planning, weather analytics, and government scheme assistance. - Built machine learning models and predictive recommendation systems using Python, Scikit-learn, Pandas, and NumPy to enable data-driven agricultural insights.	

Achievements

- Protonex 2026 – Secured First Place at a National Level Hackathon for an AI-enabled women's safety solution.
- Namma Suraksha 2.0 – Secured First Place for developing an AI-assisted cyber threat intelligence platform.
- Leadership & Collaboration – Led multidisciplinary teams to successfully deliver hackathon projects under strict deadlines.
- AI & Machine Learning – Built AI-driven solutions for agriculture, bio-acoustics, and cybersecurity.
